5th Grade Project Beyond:

Crime Scene Investigation

Fifth Grade Project Beyond students have been learning about Crime Scene Investigation. They have studied the many occupations involved in the process of solving crimes and learned about the preparation and tools used by each. We have been using our critical thinking skills to analyze the crime scene, witness affidavits and the results of our forensic investigations into fingerprints, footprints, DNA, graphology and fiber analysis in order to determine who "dog-napped" Cosmo. The students have enjoyed the first-person aspect of the investigation and look forward to learning more about forensic science in middle and high school!
